

Master and stem cells regeneration focus

Aspects of parts of the biological brain

Myelin sheath

Cell membrane

Grey matter

Neurons nerves

Glia cells

Synapsis

Areas specific function

Visual area image recognition and perception

Short term memory equilibrium emotion

Motor function initiation of voluntary muscles

Long term speech

Hearing

Pain hunger fight or flight emotions

Sensory association

Olfactory smell

Sensations from muscles and skin

Somatosensory association Evaluation of weight temperature texture etc for recognition

Written and spoken language comprehension

Eye movement orientation

Concentration planning judgement emotional expression creativity inhibition

Coordination of movement balance posture

All aspects of the brain, reptilian, mammalian right neo cortex creative and left neo cortex logical and frontal lobe genius

Visual cortex and all parts listed or not listed
