

Male Leaders: Brain Secrets Uncovered!

In my many years of brain regeneration with top leaders in all walks of life I have had the privilege and pleasure of working with the greatest minds of this age. I have improved the function of brains for scientists working at Nasa and Stanford, Silicon Valley tech virtuoso's as well leaders in the Pentagon and human potentials field.

Working with the Quantum Field I have developed the tools and techniques for accessing the stem cells from the perfected human blueprint, brought them to 100% and started a cascade of new cell growth refreshing the regenerated brain to a set point of 100%. This process dramatically improves brain capacity and function for men and women of all ages.

Men tend to 'own' their logical and survival brain better than women. These are the brains involved with running an empire, protecting the tribe and creating order to the projects. Women tend to have a stronger hold on their emotional and creative brains. This supports nurturing and bonding as well as a natural calming and connecting influence with groups.

How well men and women use their five brains (survival, emotional, creative, logical and genius) is sourced and supported by the hormones the brain was marinated in as it developed. Little boys experienced large doses of testosterone and proceeded to make crashing noises, jump around and conquer their world even as toddlers while the estrogen driven female brain would nurture her dolls, entertain her stuffed animals with tea parties and as she progressed into tweeddom ~ clothes shopping.

Left unregenerated the male and female brain will function as it was designed from the cavemen era with instinct driving the brain responses.

As we enter a new age and era, we are in a rectifying stage of human development. Women are holding leadership roles. Men are nurturing and caring for the young. The best of leadership for men is to integrate the creative and some of the emotions that

strengthen trust and confidence from their followers. For women, the stronger activations of the logical and survival brains will help them focus and follow through, helping them to take positions of greater influence and reach.

Women, as we see in the brain study have less hold on their logical brain, while men less ability in the emotional and creative brains.

Brain one survival, brain two emotional, brain three creative, brain four logical and brain five genius.

Gender & Age	Average of Brain 1	Average of Brain 2	Average of Brain 3	Average of Brain 4	Average of Brain 5
Female	23	36	32	27	12
Generation Y	23	34	20	23	11
Generation X	23	36	33	27	12
Baby Boomers	23	36	32	27	12
Silent Generation	15	16	33	34	7
Male	26	31	36	41	12
Generation Y	17	22	23	15	8
Generation X	26	28	29	43	13
Baby Boomers	27	33	38	41	13
Silent Generation	23	21	43	49	10

By Gender (with Generation Breakdown in some cases)

Silent Generation 1920 -1944

Baby Boomers 1944-1964

Gen Y 1964-1984

Gen X 1984-2004

As we move farther away from the Piscean patriarchal age we see the toppling of organizations whose structure and development relied entirely on 'man' power. The reference of a 'good old boys club' is no longer a good club to be identified with. It reflects a separatist, better than others click, no longer valued in society. Actually that club is disappearing as well-educated experienced men and women take their places in leadership in both corporations and entrepreneurial roles. We see an increase of loving creative male leaders welcoming their sisters into collaborative leadership roles with open arms!

Are you ready to experience the Only Brain Regeneration program in the world using the Quantum Field and Human Blueprint to raise your set points and cell function to 100%!
